

請照題號次序作答

Please use C, C++ or Java programming language to design your computer programs.

1. (25%) Assume you have a section of C program which looks like the following and given the running CPU has a cache of 4 Mbytes.
  - (a) Do you think the following code is an efficient way to calculate the cross product of data and weight? Explain your reason.
  - (b) What will you do if you want to improve the performance of the program?

```
int *data = (int *) malloc((2 << 24) * sizeof(int));
int weight[10] = {5, 3, 6, 7, 4, 8, 4, 2, 4, 5};
double sum = 0.0;

// assign the value to each element of data.
initialize(data);

// do the cross product
for (int j = 0; j < 10; j++) {
    for (int i = 0; i < (2<<24); i++) {
        sum += weight[j] * data[i];
    }
}
```

2. (25%) Write a program/function div(a, b, n) which can output the division of any two integers at n-digit precision? (This div function should be workable for 0 < n < 1000)
 

For example,  
 div(2, 3, 5) should output 6.6666e-1,  
 div(100, 7, 10) should output 1.428571428e1
3. (25%) A palindrome is a word, phrase, number or other sequence of units that can be read the same way in either direction. For example, "5812185" and "liffeil" are both palindromes. Given a file of all ASCII texts. Find the positions and corresponding length of all palindromes (length > 2) occurred in this text file, output (offset, length) as the result. For example, in "mississippi", we can output the palindromes occurrences as the following:
 

```
(1, 7) ississi
(1, 4) issi
(2, 5) ssiss
(3, 3) sis
(4, 4) issi
(7, 4) ippi
```
4. (25%) **Sudoku** (數獨, digit-single) is a logic-based, combinatorial number-placement puzzle. The objective is to fill a 9×9 grid with digits so that each column, each row, and each of the nine 3×3 sub-grids that compose the grid (also called "boxes", "blocks", "regions", or "sub-squares") contains all of the digits from 1 to 9. The puzzle setter provides a partially completed grid, which for a well-posed puzzle has a unique solution. Please write a program to solve a sudoku and output the result. Your sudoku program read data from a file.
